SUBJECT INDEX

A

Abscisic acid, 188, 190
Abutilon mosaic virus, 56
Acrobeloides buetschlii
  nitrogen fixation inhibition, 280
Aeciospores
  germination stimulation, 178–79
Aegricorpus, 201, 203–4, 213–14, 219
  definition, 202
Aeration
  effect on *Sclerotium rolfsii*, 98–99, 104
African cassava mosaic virus, 58
  bipartate genome, 62
  control, 77
  detection, 72
  disease losses, 58–59
  evolution, 71
  geminiviruses relationships, 68–70
  genome organization, 63–65
    diagram, 64
  infective DNA, 63
  particles, 60
  spread, 75–76
  transcription, 66
  transmission, 74–75
  variants, 67
    formation, 67
Agrobacterium
  radiobacter
    bacteriocins, 406
    biocontrol failure, 404
    plasmids, 404
  rhizogenes
    plasmid incompatibility groups, 404
    Ri plasmid, 307
  tumefaciens, 165
    bacteriocins, 406
    bacteriophage Mu, 302
    chromosomal markers transfer, 314
    chromosomal virulence factors, 314
    cytokinin formation, 393–94
    endogenous transfer, 404
    gene linkage, 400
    gene order, 400
    host-range control, 396–97
    indoleacetic acid formation, 393
    insertion elements, 401
    mutants characteristics, 308
    recombination, 401
    tartrate utilization, 406–7
    T-DNA transfer, 396
    Ti plasmid, 301, 307
Agrocinopines, 406
Agrocins, 406
Agroecosystems
  see Nematode ecology in agroecosystems
Alfalfa mosaic virus
  monoclonal antibodies, 328
    amino acid sequence homology, 337
    strain detection, 332
Alginate, 32, 37
Allen, Lucy Doris, 15
Alternaria
  alternata, 157, 186, 441, 481, 483–85
  citri, 430
  solani, 152, 156
  tenuis
    population reduction by nematodes, 278
Ammonia, 30
a-Amylase, 189
Anguina tritici
  temperature effect, 284
Anionic isoperoxidase, 227–28
Anther culture
  regeneration frequencies, 162
  resistance breeding, 159–62
Aphasmatylenchus straturatus
  effect on nitrogen fixation, 282
Aphelenchus avenae
  fungivore, 278
  fungus pathogen control, 278–79
Apple mosaic virus
  antigenic relationships, 333
  assay, 331–32
Appressoria
  postharvest diseases, 423–24, 440, 442–43
Arbutin, 386
Armillaria mellea
  biocide effect on antagonist attack, 33
  fumigation control reason, 38
  soil treatment effect on antagonist attack, 34
  Trichoderma control, 44
Aspergillus oryzae, 188–89
Athelia rolfsii, 108
Avocado
  postharvest disease control, 443–44

B

Bacillus thuringienesis, 341
Bacteriophage Mu, 301, 309
  lac gene-fusion plasmids, 302–3
  vectors, 302
Banana
  postharvest disease control, 438–40
Barley
  powdery mildew resistance
    energy costs, 477–80
    factors, 476–77
    plant growth and yield limitation, 480
    respiration, 478
    yield-limiting effect of nonhost resistance, 480–87
  saprophytic leaf fungi
    composition, 482
    defense-like changes incited by saprophytes, 481, 483–85
    elimination effect on yield, 485–86
    inoculation effect on yield, 486–87
    occurrence and frequency, 481
Barley yellow dwarf virus, 330
  strain
    antigenic relationships, 333
    detection, 332
  structure disruption, 328
Barley yellow mosaic virus
  resistance breeding, 160–61
BARSIM-I, 355, 363, 366, 368
  data basis, 362
  host growth, 368
  initializing the model, 369
  output severity use, 361
  simular unit element, 367
  spatial attributes representation, 369
  time delays, 371
  tracking time, 365
  use, 374
  weather variables, 370
Bayley-Balfour, Isaac, 15
Bean common mosiac virus
  antigenic relationships, 334

Bean golden mosaic virus, 55
diagnosis, 73
evolution, 71
geminiviruses relationships, 68
DNA sequence homologies, 70–71
genome
organization, 63
size, 62
particles, 60
components, 60
Beet curly top virus, 55, 58–59, 65
control, 77
detection, 72
in vector, 74
evolution, 72
geminiviruses relationships, 68
host reservoirs, 75
particle components, 60
stability, 60
variants, 67
vector transmission, 73–74
Benomyl, 425–27, 432, 439–44, 485
cutinase inhibition, 244
resistance, 434
resistance, 433–34
Benzaldehyde, 175
occurrence, 176
teliospore germination stimulation, 179
Benzoic acid, 443
Benzonitrile, 175, 178, 181–82
Benzylcyanide, 175
Bernard, Noel, 20
Bioregulatory action of flavor compounds, 173–99
effects on differentiation and growth, 184–86
effects on enzyme induction, 189–90
germination stimulation
other genera, 179–80
pine pollen, 183
rust and smuts, 176–79
urediniospores in pustules, 180–83
weed seed, 183–84
germination stimulators nature occurrence, 175
table, 176
homologous series of compounds, 188–89
implications for disease and pest control, 193–95
interactions of stimulators and water vapor, 187
nononal and water interaction, 187–88
introduction, 173–74
mechanisms of action, 190–93
physical and chemical properties of flavor compounds, 174–75
Biphenyl, 431
resistance, 434
Blackman, V. H. 15, 17
Blakeslea trispora, 179, 190
Boletus variegatus, 185
Boolean model
environment/parasite/host specificity, 214–15
application, 215
detecting definitive genotypes, 217
gene management, 217–18
physiological basis of definitive phenotypes, 218
quantitative effects, 215–17
race concept, 218
parasite/host specificity, 208–10
summary, 218–19
Borax, 431
Borlaug, Norman, 8
Botrytis
allii, 47
cinerea, 43–44, 86–87
cutinase, 228–29
quiescent infections, 424
Brierley, William, B., 21
Broatch, Margaret, 13
Brome mosaic virus
amino acid sequence homology, 337
RNA-dependent RNA replicase complex, 336
structure disruption, 328
Brown, Gavin, 13
Brown, Lucy, 13–14
Brown, William, 13–18
early life, 13
education and move to London, 14–15
personal research, 15–16
university teacher, 16–17
Burkhard, Willy, 22
sec-Butylamine, 428, 430–32, 434

C

Caenorhabditis elegans
temperature effect, 284
Calcium, 114
Caloscypha fulgens, 88
Captafol, 444
Captan, 425
Carbendazim, 427, 432–33, 439, 444
Carbon dioxide
effect
Sclerotium rolfsii, 98–99
Trichoderma growth, 24–25
Carbon disulfide, 38
Carboxymethylcellulase, 385
Carnation ringspot virus, 334
Carotene, 179
Carvone, 177
Cauliflower mosaic virus
amino acid homology, 337
Cellulase, 107
genes, 314
molecular genetics, 385–86
Ceratocystis
paradoxa, 443
piceae
coremia formation, 186
ulmi, 43
CERCOS
gaming, 373–74
validity testing, 373
Cereal rusts, parasite/host/environment specificity, 201–22
environmental influences on parasite/host specificity, 210–11
conclusion, 213
evidence from other systems, 212–13
historical perspectives, 211–12
extension of Boolean model to include environment, 214–15
application, 215
detecting definitive genotypes, 217
gene management, 217–18
physiological basis of definitive phenotypes, 218
quantitative effects, 215–17
race concept, 218
genetic basis of parasite/host specificity, 204
a Boolean model, 208–10
differing views of gene-for-gene concept, 204–5
model, 206–8
proof, 205–6
Robinson's Person/Habgood model, 207–8
introduction, 201–2
summary, 218–19
terminology, 202
disease, 202
parasite:host association, 202
resistance, 203–4
Chitin, 286

Chitinase, 47–48
Chlamydospores, 37
  Trichoderma and *Gliocladium*, 29–30
    formation, 25–26
    germination, 26
Chloris striate mosaic virus particles, 59–60
Chlorothalonil, 425, 442
Citrus
  postharvest disease control, 430–38
Cladosporium
  cladosporiodes, 481, 483–84
  herbarum, 481, 483, 487
  macrocarpum, 481, 483, 487
Clostridium botulinum, 341
Colletotrichum
  capsici
    cutinase, 236, 238
  gloeosporioides
    control, 243
    cutinase, 229, 232
    host penetration, 237, 240
    inoculum reduction, 423
    latent stage, 424
  graminicola
    cutinase, 229
    host penetration inhibition, 240
  musae
    latent stage, 423–24
Continuous Systems Modeling Program, 363, 365, 367, 370
Coremia formation, 186
Coronatine, 390–91
Corynebacterium
  flacumfaciens subsp. *oortii*
    conjugative properties, 403
    resistance to chemicals, 405
  sepedonicum
    detection, 339
    monoclonal antibodies, 338
Cotton leaf crumple virus, 59
Cowpea mosaic virus
  amino acid homology, 337
  replicase, 336
Coxiella burnetii, 341
Criconemoides simile, 285
Cronartium
  fusiforme, 85, 88
  ribicola, 166
Crop loss assessment, the threshold theory, 455–73
  agronomical aspects, 459–62
    production situations, 459–60

  Cytospora chrysosperma, 93

D

Dalbulus maidis, 499
de Bary, Anton, 21
Decanal, 186
Dengue virus, 335
Dichlofluanid, 425
Dickinson, 21
Dicloran, 426–28
Didymascella thujina, 85
Diethylpyrocarbamate, 234
2,4-Dinitrophenol, 191
Diplodia natalensis, 430
Dipodascus aggregatus, 185, 188
Disease resistance, limiting the effect on yield, 475–90
  conclusions, 487–88
  introduction, 475
  yield-limiting effect on nonhost resistance, 480–81
    defense-like changes incited by saprophytes, 481, 483–85
    leaf saprophyte elimination effect, 485–86
    leaf saprophyte inoculation effect, 486–87
    mycoflora composition on barley leaves, 482
    saprophytic leaf fungi occurrence, 481

yield-limiting effect of powdery mildew resistance
active defense process of barley, 476–77
energy costs of resistance, 477–80
plant growth and yield, 480
Disease resistance breeding strategies, 149–72
cell and tissue culture techniques
disease-resistance breeding examples, 153–54
in vitro selection within heterogeneous material, 159–63
meristem culture, 150
new variability creation, 151–59
procedures without selection systems, 151–54
procedures with selection systems, 154
protoplast fusion, 164
regeneration frequencies in anther culture experiments, 162
screening isolated microspores, 162–63
spontaneous segregation during anther culture, 159
conclusion, 166–67
gene technology approaches
diagnoses, 165–66
gene transfer, 165
introduction, 149–50
Ditylenchus
destructor, 278
dipsaci, 144
myceliophagus, 278
cDNA
cutinase, 236–37, 242
Dodecanal, 186
Dothistroma pini, 93

E

ELISA, 324, 327
monoclonal antibody-producing hybridomas selection, 328
virus
detection, 328–32
relationship analysis, 332
EPDEM, 355
host growth, 368
EPICORN, 368
components, 360–61
data basis, 362

quadrant variance techniques, 137–38
spectral analysis, 137–38
purpose, 131
Solanum apical leaf curl virus, 56
particles, 59
Somaclonal variation, 151, 154–55
Sorbic acid, 435
Southern bean mosaic virus
detection, 332
Soybean mosaic virus
antigenic relationships, 330
detection, 330–31
Spectral analysis, 137
Spiroplasma citri
monoclonal antibodies, 340
Sporidesmium sclerotivorum, 47
Squash leaf curl rivus, 59
detection, 72
geminiviruses relationships, 68
inactivation, 60
Stereum
purpureum, 43
sanguinolentum
growth stimulation, 184–85
Streptomyces scabies, 153, 245
cutinase, 229, 232
Streptomycin, 405
Styrene, 184
Suberin
biosynthesis, 227
nature, 226–27
suberized wall model, 226
Suicide plasmids, 303, 306–7, 311
Sulfur dioxide, 430
Sweet clover necrotic mosaic virus, 334
Syringomycin, 391–92, 407
siderophore role, 394
Syringotoxin, 391–92

T

Tartrate, 406
T-DNA
transfer, 396, 402
Teliospores
germination stimulation, 179, 194
Temperature
effect
host specificity, 212–13
Sclerotium rolfsii, 98, 104
nematode population regulation, 283–84
Thiabendazole, 425–27, 430, 432, 435–36, 441–44
banana treatment, 439–40
resistance, 434
Thiamine, 405–6
Thiophanate-methyl, 426, 432–33, 439, 441
Thiram
effect on Trichoderma, 34
L-Threonine, 107
Thurston, H. D., 8
Ti plasmid, 301–2, 307, 381, 396, 402, 407
incompatibility groups, 404–5
mutants characteristics, 308
pathogenicity genes, 382
opine permeases, 405
Tobacco etch virus
antigenic relationships, 334
inclusion body protein study, 335
structure disruption, 328
Tobacco leaf curl virus, 77
geminiviruses relationships, 68
Tobacco mosaic virus, 159
antigenic structure, 327
monoclonal antibodies, 328–29
amino acid sequence homology, 337
strain differentiation, 334
virus infection studies, 335
Tobacco streak virus
antigenic relationships, 333
Tobacco vein mottle virus
antigenic relationships, 334
inclusion body protein study, 335
Tobacco yellow dwarf virus
geminiviruses relationships, 68
Tomato golden mosaic virus
diagnosis, 71–72
evolution, 71
geminiviruses relationships, 68–69
DNA sequence homologies, 70–71
genome
components, 62
organization, 63
transmission, 75
Tomato leaf curl virus, 59
Tomato pseudo-curly top virus, 56
host resevoirs, 75
vector transmission, 74
Tomato ringspot virus
detection, 331
Tomato yellow leaf curl virus, 59
host reservoirs, 75
spread, 76
Transposon mutagenesis and virulence genes, 297–320
chromosomal mobilization systems, 313–14
Agrobacterium, 314
Erwinia, 313–14
conclusions, 314–15
introduction, 297–98
mobile genetic elements definition and properties, 298–99

bacteriophage Mu, 301
drug-resistance transposons, 300
insertion sequence elements, 299
transposons, 299–301
mutant characteristics
Agrobacterium species, 307–8
Erwinia species and subspecies, 308–10
Pseudomonas species and pathovars, 310–13
Xanthomonas species, 313
vectors, 301
bacteriophage Mu, 302
chromosome mobilizing vectors, 307
Mu and mini-Mu lac gene-fusion plasmids, 302–3
mutagenizing cloned DNA, 307
plasmids and transposable elements for mutagenizing phytopathogens, 304–5
suicide vectors, 303, 306–7
suicide vector selection, 306
Transposon Tn5, 306–12, 314, 390–92, 395, 399
properties, 300–1
Triadimefon, 444
Trichoderma
hamatum, 31, 41, 48
ammonia effect, 30
antibiotic formation, 27
biocontrol agent, 42
chlamydospores, 25
distribution, 28
mycoparasitism, 47
suppressive soil, 39
harzianum, 31, 41, 48, 101
ammonia effect, 30
biocide effect in soil, 33
biocontrol agent, 42, 44–45
biocontrol mechanism, 46
chlamydospores, 26
conidia survival in soil, 29
delivery systems, 36
distribution, 28
lack of rhizosphere establishment, 35
metabolites, 27
mutagenesis, 38
mycoparasitism, 47
Sclerotium control, 40, 114–116
suppressive soils, 39
thiram tolerance, 34
koningii
ammonia effect, 30
distribution, 28
lignorum, 46
polysporum
biocontrol agent, 43
distribution, 28
pellet formulations, 36
trichodermin, 27
pseudokoningii
biocontrol agent, 42, 44
distribution, 28
viride, 31, 39–41, 114
biocide effect in soil, 33
biocontrol agent, 42–43
chlamydospores, 26
delivery systems, 36
distribution, 28
gliotoxin, 45–46
heat effect on suppression of *Fusarium*, 35
magnesium effect on growth, 24
mutagenesis, 38
mycoparasitism, 47
photoinduced sporulation inhibition, 25
Trichoderma, biology, ecology and biocontrol potential, 23–54
aerial application, 42–44
biocontrol mechanisms, 45–48
mycoparasitism, 47
toxic metabolites, 45–46
biocontrol potential in soil
indigenous population role, 38–39
soil augmentation with fungi, 39–40
soil augmentation with fermentor biomass, 41
soil augmentation with fungi, 39–40
biocontrol role in integrated pest management, 44–45
biosystematics and morphology, 24
ecology, 27–35
future priorities, 48
growth, morphogenesis and sporulation in culture, 24
germination, 26
growth, 24–25
morphogenesis, 25
sporulation, 25–26
introduction, 23
isolation and enumeration, 28–29
metabolite production, 26–27
occurrence and distribution, 28
population dynamics in soil
chemical treatment, 32
establishment and proliferation, 31–32
establishment in rhizosphere, 35
soil fungistasis, 30–31
soil treatments, 34–35
survival, 29–30
production and delivery systems, 36–37
seed treatment, 41–42
Trichodermin, 27
Triforine, 444
Trisporic acid, 190
Tryptophan, 392
Turnip yellow mosaic virus
replication complex, 336
Tylenchulus semipenetrans
Pratylenchus interaction, 285

U

Ulocladium consortiale
cutinase, 229, 232
Urediniospores
carotenes, 179
germination
in pustules, 180–83, 192–93
stimulation, 176–79, 187–89, 192–93
nonanal source, 191
Uredo eichhorniae, 178
Uromyces
phaseoli
urediniospore germination stimulation, 177, 181, 188–89
pontederiae, 178
trifolii-repentis, 178
vignae, 181, 183, 189
urediniospore germination stimulation, 177
Ustilage
avenae, 179
maydis, 179
tritici, 179

V

Verticillium dahliae, 40–41, 132, 135, 140
alfalfa volatiles effects, 185–86
Vesicular stomatitis virus, 335
Viridin, 26–27, 46

W

Water
spore germination stimulators interaction, 187

Watermelon mosaic virus
antigenic relationships, 334
inclusion body protein studies, 335
Weber, Sophie, 21
Wheat dwarf virus
detection, 72
in vector, 74
Wheat streak mosaic virus
temperature influence, 213

X

Xanthomonas
campestris, 166
suicide plasmids, 306
campestris pv. *campestris*
avirulent mutants, 399
identification, 338
pathogenicity mutants, 313
subgroups, 340
transposons, 300
campestris pv. *malvacearum*
avirulence genes, 398
campestris pv. *vesicatoria*
chemical resistance, 405
conjugative properties, 403
endogenous transfer system, 404
host range control, 398
